XVME-659
VMEbus AMD-K6®-2 Processor Module

Features

• 333 MHz AMD-K6®-2 processor with 3DNOW!™ technology for enhanced 3D graphics
• Supports up to 256 MB of fast-page or EDO DRAM in 72-pin SIMM sites, with ECC or parity
• 512K of synchronous Level 2 pipeline cache
• High-performance PCI local bus SVGA controller with 2 MB of VRAM
• Secondary IDE controller
• PCI Enhanced IDE controller with DMA
• 10/100 Mbit PCI Ethernet controller with front RJ-45 connector
• Up to 72 MB of optional flash disk storage
• PCI-to-VMEbus interface with DMA
• UltraSCSI PCI host adapter
• PCI Mezzanine Card (PMC) expansion site
• Four high-speed 16550-compatible serial ports
• Two Universal Serial Bus (USB) ports
• EPP or ECP parallel port
• PS/2-style keyboard and mouse ports
• Configurable hardware byte-swapping logic

Overview

The XVME-659 is a powerful VMEbus PC compatible processor module from Xycom Automation, the pioneer and leader in VMEbus PC technology. This powerful two-slot VMEbus processor integrates a 333 MHz AMD-K6-2 CPU with a PCI-to-VMEbus interface and allows users to take advantage of the powerful multiprocessing capability of the VMEbus while utilizing standard off-the-shelf PC software and operating systems.

At the core of the XVME-659 module is the AMD-K6-2 CPU with 3DNOW!™ technology. 3DNOW!™ Technology is the first innovation to the x86 processor architecture that significantly enhances floating point intensive three-dimensional (3D) graphics performance. The AMD-K6-2 CPU combined with 512K of synchronous Level 2 pipeline cache and up to 256 MB of fast-page or EDO DRAM can provide performance comparable to many of the Pentium II systems on the market today.

The XVME-659 module contains a wide breadth of I/O including PCI Graphics, EIDE, Ultra SCSI and Ethernet controllers, two Universal Serial Bus (USB) Ports, four high-speed serial ports, one EPP/ECP parallel port, and PS/2 style keyboard and mouse ports. The module also has one onboard PCI Mezzanine Card (PMC) site, and additional I/O expansion is available using Xycom Automation’s modular I/O carrier modules (XVME-976), which provide a mechanism to expand your system using additional PMC or PC/104 modules.

The XVME-659 module is an unbeatable solution for power and I/O for VMEbus systems.
The XVME-659 features a high-performance, highly integrated Intel chipset that incorporates a host-to-PCI bus interface and PCI-to-ISA bridge with Universal Serial Bus host controller.

**Display Support**

Graphics support is provided by a highly integrated SVGA controller with an internal 2 MB 83 MHz SDRAM frame buffer. Resolutions of up to 1280 × 1024 with 256 colors are supported. The controller uses a 64-bit internal graphics engine with hardware BitBLT to enhance Windows GUI performance. SVG output is available at the module front panel in standard 15-pin D shell connector.

**Network Support**

The XVME-659 contains a state-of-the-art Intel 82558 10/100 Mbit Ethernet controller with a 32-bit PCI bus mastering interface to support bus transfers of 100 Mbits per second. The RJ-45 connector on the module’s front panel provides autosensing for 10 BaseT and 100 BaseTX connections.

**VMEbus Interface**

The PCI-to-VMEbus bridge device provides users with a flexible mapping architecture to allow configurations that will support virtually all user applications. The bridge device supports multiple VME master and slave images with BLT and DMA capability for high-performance block data operations. The XVME-659 also contains onboard hardware byte-swapping.

**Expansion**

Two expansion modules are available for use with the XVME-659. The XVME-976/1 allows for one additional PMC module and one PC/104 module and the XVME-976/104 provides for two PC/104 modules.

**Ultra SCSI Support**

SCSI support is enabled by an UltraSCSI host adapter with a 32-bit bus mastering PCI interface. This highly integrated UltraSCSI controller contains a SCSI phase engine which provides auto-execution of SCSI commands freeing up the host CPU to perform other tasks.

**Mass Storage Support**

Floppy and hard drive functions are supported by bus mastering EIDE and PC-compatible controllers. Signals for both the floppy and EIDE interfaces are routed to the A and C rows of the module’s P2 connector, allowing the XVME-659 to access a variety of mass-storage options. These options include single-slot hard and floppy disk modules (XVME-977), solid-state mass storage modules or externally mounted mass storage devices using the XVME-973 drive adaptor module.

**Nonvolatile Storage**

An onboard 32-pin socket provides nonvolatile storage with zero-power SRAM or an M-Systems DiskOnChip® flash disk. The DiskOnChip® flash disk (XVME-992) will provide up to 72 MB of solid-state disk storage for embedded applications.

**I/O Support**

The PCI to ISA bridge device contains a high speed bus mastering EIDE controller and two Universal Serial bus (USB) ports with connections on the module’s front panel for connecting the next generation of PC-compatible peripheral devices.

Other functions provided on the XVME-659 include four 16550-compatible RS-232C serial ports, one ECP/EPP parallel port, and PS/2-style keyboard and mouse ports. All connections to these ports are available on the front panel.

**Software Support**

Although the XVME-659 is fully PC-compatible and will run “off-the-shelf” PC software, most packages will not be able to access the features of the VMEbus. To solve this problem, Xycom Automation has developed extensive Board Support Packages (BSPs) that simplify the integration of VMEbus data into PC software applications. Xycom Automation’s BSPs provide users with an efficient high-level interface between their applications and the VMEbus-to-PCI bridge device. Board Support Packages are available for MS-DOS®, Windows NT®, QNX®, Lynx, Solaris™, and VxWorks®.
Hardware Specifications

**CPU**
333 MHz AMD-K6-2 processor with 3DNow! technology

**PCI Super VGA Graphics Controller**
1280 × 1024; 256 colors
2 MB VRAM

**PCI Ethernet Controller**
Intel 82558 Controller
10/100 Mbps Fast Ethernet
RJ-45 Connector on module front panel

**Serial Ports**
Two RS-232C-compatible
Two Universal Serial Bus ports

**PCI Ultra SCSI Controller**
32-bit bus master PCI interface

**Parallel Interface**
One EPP/ECP compatible

**Onboard Memory**
Fast-page or EDO DRAM, 32 MB to 256 MB

**Cache**
512K pipeline burst cache

**Power Specifications**
11.82 amps (max.)
7.2 amps (typical)

*Requires VME P2 Backplane*
Environmental Specifications

**Temperature**
- Operating: 0-45°C with 100 CFM airflow
- Nonoperating: -45° to 85°C

**Vibration**
- Frequency: 5 to 2000 Hz
- Operating: .015" (.38 mm) peak-to-peak displacement
  - 2.5 g (maximum) acceleration
- Nonoperating: .030" (.76 mm) peak-to-peak displacement
  - 5.0 g (maximum) acceleration

**Shock**
- Operating: 30 g peak acceleration
  - 11 msec duration
- Nonoperating: 50 g peak acceleration
  - 11 msec duration

**Humidity**
- Operating: 20% to 80% RH, noncondensing
- Nonoperating: 20% to 80% RH, noncondensing

VMEbus Compliance

- Complies with VMEbus Specification, ANSI/VITA 1-1994
- A32/A24/A16:D64/D32/D16/D08(EO) DTB Master
- A32/A24:D64/D32/D16/D08(EO) DTB Slave
- R(0-3) Bus Requester
- Interrupter I(1)-I(7) DYN
- IH(1)-IH(7) Interrupt Handler
- SYSCLK and SYSRESET Driver
- PRI, SGL, RRS Arbiter
- RWD, ROR bus release
- Form Factor: DOUBLE
  - 233 mm × 160 mm (9.2" × 6.3")
